

Stop-Loss Trigger Price: Broker Field Mapping Guide

Zerodha (Kite) · Angel One (SmartAPI) · Upstox · ICICI Direct (ICICIdirect.com)

KEYWORDS: trigger price Zerodha | trigger price Angel One | stop loss Upstox | trigger price ICICI Direct | SL vs SL-M India

HOW TO USE THIS GUIDE:

Each broker uses different UI labels for the same underlying concepts. Use this guide to map generic stop-loss concepts to your broker's exact field names.

UNIVERSAL CONCEPTS (broker-agnostic)

T TRIGGER PRICE

The activation price — when LTP hits this, your dormant SL order wakes up and is sent to the exchange

L LIMIT PRICE

The execution floor/ceiling inside the activated order (SL only; SL-M has no limit price field)

E ENTRY/ORDER PRICE

The price at which your position was opened (not a stop-loss field, shown for context)

M MARKET ORDER

Used in SL-M: no limit price — fills at best available market price when trigger hits

ZERODHA (Kite)

India's largest broker — uses separate Trigger Price & Price fields

UI Order Type dropdown

Select SL for limit stop, SL-M for market stop

T Trigger Price field

= Universal TRIGGER PRICE (T). LTP must hit this to activate.

L Price field

= Universal LIMIT PRICE (L). Only visible/required for SL orders.

SL: Long @ 100: SL order → Trigger = 95, Price = 94.90

SL-M: Long @ 100: SL-M order → Trigger = 95, Price field hidden/NA

TIPS:

• GTT (Good Till Triggered) orders survive across sessions — use for o

• ERR: "Trigger price can't be higher than price" → Trigger > Limit for sell SL (swap them)

ANGEL ONE (Smart Web / App)

Shows Stop Loss Trigger Price & Stop Loss Limit Price as explicit labels

UI Order Type

Choose SL or SL-M from the order type menu

T Stop Loss Trigger Price

= Universal TRIGGER PRICE (T). Activation level.

L Stop Loss Limit Price / Price

= Universal LIMIT PRICE (L). Required for SL; hidden for SL-M.

SL: Short @ 100: SL order → Stop Loss Trigger = 105, Stop Loss Price = 105.10

SL-M: Short @ 100: SL-M → Stop Loss Trigger = 105 only

TIPS:

• Angel One app labels fields clearly as 'Stop Loss Trigger' vs 'Stop

• ERR: For buy SL: Trigger < Limit (Limit >= Trigger). Reversal = error

UPSTOX (Pro Web / App)

Trigger Price activates the SL; Limit Price sets the execution floor

UI Order Type

SL or SL-M from order type dropdown

T Trigger Price

= Universal TRIGGER PRICE (T). Dormant until this is hit.

L Limit Price

= Universal LIMIT PRICE (L). Used only in SL order type.

SL: Long @ 50: SL → Trigger = 47, Limit = 46.80

SL-M: Long @ 50: SL-M → Trigger = 47, Limit field disabled

TIPS:

• Upstox Pro shows both fields in the order form — Trigger activates,

• ERR: Sell SL: Trigger >= Limit required. Buy SL: Limit >= Trigger required

ICICI DIRECT (ICICIdirect.com)

Uses 'Trigger Rate' terminology — same concept as trigger price

UI Order Type

Stop Loss or Stop Loss Market from dropdown

T Trigger Rate

= Universal TRIGGER PRICE (T). ICICI's label for the activation price.

L Rate / Price

= Universal LIMIT PRICE (L). The execution price for SL orders.

SL: Long @ 200: Stop Loss → Trigger Rate = 190, Rate = 189.50

SL-M: Long @ 200: Stop Loss Market → Trigger Rate = 190 only

TIPS:

• ICICI uses 'Rate' instead of 'Price' — same concept, different label

• ERR: "Trigger rate cannot be higher than current rate" for buy SL = trigger > limit error

QUICK REFERENCE: Concept → Field Name Across All 4 Brokers

Concept	Zerodha (Kite)	Angel One	Upstox	ICICI Direct
Trigger Price field label	Trigger Price	Stop Loss Trigger Price	Trigger Price	Trigger Rate
Limit Price field label	Price	Stop Loss Limit Price / Price	Limit Price	Rate
SL order type name	SL	Stop Loss	SL	Stop Loss
SL-M order type name	SL-M	Stop Loss Market	SL-M	Stop Loss Market
GTT / persistent orders	GTT (separate)	GTT (separate)	GTT (separate)	iClick2Gain
